

FREE THROW MANIA!

Directions: Express the number of free throws made by each person as a fraction and as a decimal.

Example: If Michael Jordan makes 8 of 10 free throws, your fraction would be expressed as $\frac{8}{10}$.
To find the decimal, divide the numerator, by the denominator.

$$10 \overline{) 8.0} \quad \frac{8}{10} = 0.8$$

To find the percentage, make sure that you have two numbers after the decimal (the hundredths place). When you divide!

$$10 \overline{) 8.00} \\ - 8.0 \downarrow \\ \underline{00} \\ - 0 \\ \underline{0}$$
