

Using Integer Rules With Fractions

Directions: When the signs are the same find the sum and keep the same sign. When the signs are different, find the difference of the numbers and use the sign with the larger absolute value.

$$\begin{array}{r} 1) \quad \frac{4}{5} \\ - \frac{3}{4} \\ \hline \end{array}$$

$$\begin{array}{r} 2) \quad - \frac{5}{6} \\ + \frac{2}{3} \\ \hline \end{array}$$

$$\begin{array}{r} 3) \quad \frac{1}{6} \\ + \frac{5}{8} \\ \hline \end{array}$$

$$\begin{array}{r} 4) \quad - \frac{2}{3} \\ - \frac{1}{2} \\ \hline \end{array}$$

$$\begin{array}{r} 5) \quad - \frac{7}{10} \\ - \frac{6}{15} \\ \hline \end{array}$$

$$\begin{array}{r} 6) \quad \frac{7}{20} \\ - \frac{1}{4} \\ \hline \end{array}$$

$$\begin{array}{r} 7) \quad \frac{1}{6} \\ + \frac{5}{8} \\ \hline \end{array}$$

$$\begin{array}{r} 8) \quad \frac{5}{8} \\ - \frac{1}{3} \\ \hline \end{array}$$

$$\begin{array}{r} 9) \quad \frac{19}{40} \\ + \frac{7}{8} \\ \hline \end{array}$$

$$\begin{array}{r} 10) \quad - \frac{5}{6} \\ + \frac{2}{9} \\ \hline \end{array}$$

$$\begin{array}{r} 11) \quad \frac{1}{2} \\ - \frac{4}{5} \\ \hline \end{array}$$

$$\begin{array}{r} 12) \quad \frac{3}{4} \\ + \frac{3}{10} \\ \hline \end{array}$$

$$\begin{array}{r} 13) \quad - \frac{4}{5} \\ - \frac{1}{3} \\ \hline \end{array}$$

$$\begin{array}{r} 14) \quad - \frac{4}{9} \\ + \frac{7}{9} \\ \hline \end{array}$$

$$\begin{array}{r} 15) \quad \frac{1}{5} \\ + \frac{9}{15} \\ \hline \end{array}$$

$$\begin{array}{r} 16) \quad - \frac{15}{16} \\ - \frac{1}{4} \\ \hline \end{array}$$
